

CaseBuilder Incident Reporting and Management System

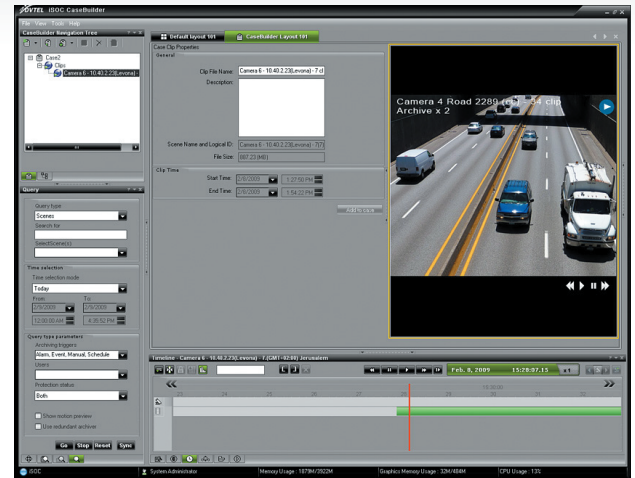

iSOC Module

The CaseBuilder Incident Reporting and Management System is an evidence and risk management tool designed to replace paper systems. This software system allows the user to work in real-time thus enabling a more efficient tracking of incidents and events as they occur.

The software solution is designed to be a module of the intelligent Security Operations (iSOC) platform. The tracking of incidents and events using CaseBuilder features video clips, audio clips and snapshots. It can also include meta-data such as events, alarms and bookmarks. The user can add attachments of any file type or URLs, as well as text descriptions to the case and its data.

The CaseBuilder Incident Reporting and Management System's critical information is protected from server/storage malfunctions and erasure due to human error. The completed reports are stored outside of the iSOC Archiver storage along with any video clips, still images, audio, text and other data, so that they can't be overwritten. The entire CaseBuilder database is easily backed up.

- Builds "Case Files" with Archive Video, Photos, Text and other file attachments
- Links to iSOC Video, Audio and Data
- CaseBuilder is embedded in ControlCenter as a predefined workspace mode, allowing for seamless operation within iSOC.
- Cases are saved separately on dedicated storage
- Cases can be exported to portable media for offline investigations
- CaseBuilder is accessible only to privileged users

CaseBuilder

CaseBuilder Highlights:

- Incident Reporting and Management
- Incident Tracking, Reporting and Analysis
- Intuitive Video Search and Event Recording
- Automatic File Transfer from NVRS to CaseBuilder
- Automatic Report Numbering
- Full CaseBuilder User Management

Without CaseBuilder—it's just Raw Data
